DETAILED ACTION

1. The amendment filed on November 16, 2003 has been entered. Claims 1-5, 7-9, and 11-14 are pending.

Claim Rejections - 35 USC § 112

2. Claims 1-5, 7-9, and 11-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The amended claims recite “inorganic platelet-form substrates” having a “particle size *distribution*” (emphasis added) of 1 μm to 60 μm . However, the specification, as originally filed, only disclosed a particle size of 1 μm to 60 μm . Whereas the term “particle size refers to a single point within the claimed range, a “distribution” of particle sizes indicates that inorganic platelet form substrates can have a variety of particles within the claimed range. There was no teaching or suggestion of a distribution of particle sizes within the range of 1 μm to 60 μm and the claim limitation therefore constitutes new matter.

Claim Rejections - 35 USC § 102

3. Claims 1-4, 9, and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 4238378 A for the reasons substantially set forth in item 2 of the Office Action mailed June 18, 2001 (Paper No. 11).

Response to Arguments

4. Applicant's arguments filed November 6, 2002 have been fully considered but they are not persuasive. Applicants argue that the DE 4238378 reference does not teach applying the absorber material (1) directly to the raw paper as a coating material to yield a homogenous distribution of the absorber in the coating layer or (2) incorporated into the body of the paper to yield a homogenous distribution of the absorber material throughout the paper itself. This is unpersuasive because the present claims, while reciting a homogenous composition with a particle size distribution, do not require a homogenous distribution of the absorber material. Even if the prior art does not teach a homogenous distribution (an assertion the Examiner does not agree with), the claims do not require such a limitation. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
